

# XVUE® FACE MATCHING FOR TRANSPORTATION & LOGISTICS

Protect Drivers, Assets & Infrastructure with Real-Time Identity Intelligence

## Modern Identity Assurance for Secure Transportation Operations

Transportation and logistics organizations operate across complex, high-risk environments—terminals, depots, yards, ports, and transit hubs—where unauthorized access, cargo theft, and safety incidents can disrupt operations and impact the supply chain. XVUE® by NetX delivers a cloud-based facial recognition solution designed to strengthen physical security, verify identities, and improve situational awareness across transportation networks.

With real-time alerts, high-accuracy recognition, and seamless integration with existing camera and access systems, XVUE® enables transportation operators to identify risks early, control access to critical areas, and maintain secure, uninterrupted operations.

## Key Benefits

### 1) Asset & Personnel Protection

- Detect banned, suspended, or high-risk individuals
- Reduce cargo theft, tampering, and unauthorized yard access
- Monitor terminals, depots, loading areas, and control zones
- Deliver instant alerts to security, dispatch, and ops teams
- Support rapid post-incident investigation with forensic search capabilities

### 2) Driver, Vendor & Access Management

- Verify drivers, contractors, vendors, and third-party personnel at entry points
- Search previously recorded video and past events to identify individuals after incidents occur
- Prevent unauthorized access to restricted areas (yards, maintenance bays, dispatch centers, bonded zones)
- Integrate with existing RTSP cameras, gate controls, and monitoring centers

### 3) Security, Privacy & Regulatory Alignment

- Built with enterprise-grade security and role-based access controls
- MFA-secured user access with complete audit trails
- Supports transportation safety, security, and operational compliance standards
